

GENERAL REQUIREMENTS FOR ESTABLISHING A PUBLIC SWIMMING POOL

Issued under authority of Part 125 of 1978 PA 368, as amended.

Michigan's Public Health Code, 1978 PA 368, as amended, and the administrative rules adopted pursuant to the act establish the requirements for building and operating a public swimming pool. A booklet containing the provisions of the act and [administrative rules](#) for public swimming pools should be obtained from the Michigan Department of Environmental Quality (MDEQ) or from your local county or district health department. A swimming pool is defined in Part 125 of the act, as "an artificial body of water used collectively by a number of individuals primarily for the purpose of swimming, wading, recreation or instruction and includes related equipment, structures, areas, and enclosures intended for the use of individuals using or operating the swimming pool such as equipment, dressing, locker, shower, and toilet rooms. Public swimming pools include those which are for parks, schools, motels, camps, resorts, apartments, clubs, hotels, mobile home parks, subdivisions, and the like."

Prior to beginning construction of a public swimming pool or making alterations to an existing public swimming pool, the developer or owner must obtain a construction permit, issued by the MDEQ. This permit ensures that any investments made in pool construction can be recovered. This is most significant for spas or hot tubs considering very few of the spas available at stores or businesses meet the construction requirements. It is also recommended that the developer first contact a pool contractor with experience in building public swimming pools to obtain a cost estimate and general information on the options available for pool construction.

To obtain a construction permit, the developer or pool contractor must submit a proposal to the Environmental Health Division of the local health department and to the MDEQ, Environmental Health Section, Campgrounds & Pools Unit. This proposal should contain a completed Application for a Construction Permit, form EQP 1733, and plans drawn to scale. The plans need to be prepared by an engineer or architect licensed in Michigan if the total project cost exceeds \$15,000. Three sets of the plans should be submitted to the MDEQ and one set to the local health department.

The local health department and the MDEQ will review the proposal. The developer will then be issued a construction permit or advised in writing of the aspects of the proposal that do not comply, as appropriate.

The issuance of a swimming pool construction permit by the MDEQ does not relieve the owner from obtaining local building permits or complying with other local requirements or the provisions of other State of Michigan laws. Inquiries concerning local permits can be made to the clerk or building inspector in the city, village, or township in which the campground is to be located.

Prior to opening the public swimming pool for use, the owner must obtain an operating permit from the MDEQ. An application for an operating permit must be submitted first. The application for an operating permit is sent to the owner during the construction permit process. If this application is lost, please contact the MDEQ to arrange to have another application prepared and sent. After the application is submitted to the MDEQ, the owner or pool contractor should contact the MDEQ to request an initial inspection. The purpose of the initial inspection is to ensure that the swimming pool is built in accord with the approved plans and that the pool water quality meets standards. The owner will be informed of any items of noncompliance or given approval to open the swimming pool for public use, as appropriate, at the conclusion of the initial inspection.

Inquiries concerning the construction and licensing of a public swimming pool should be made to the Environmental Health Division of the local health department or the MDEQ at 517-241-1353.
